

A Health Workshop on

CANCER!!

Understanding the Disease and the Risks Factors!!

Cancer is one of the leading causes of deaths worldwide. It is a disease that affects all age-groups, the old and the young as well as children. Cancer causes abnormal growth of cells in the body and can develop in any part of the body, such as the lung, colon, breast, skin or bones.

Are we at risk of developing cancer? What can we do to minimize the risks?

This workshop will help us understand the cancer better and provide us with necessary information that can help us reduce any chances of developing the disease.

Dr. Martin Sprenger will be available to offer an expert perspective and take our questions.

Date: Saturday, 28th of August 2010

**Venue: ProHealth Office, Schörgelgasse 9
(near Dietrichsteinplatz), 8010 Graz**
